DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-8, drawn to an immunoglobulin polypeptide, classified in class 435, subclass 91.1.
 - II. Claims 9-16, drawn to polynucleotide, classified in class 435, subclass 69.1.
 - III. Claims 17-23, drawn to an immunosorbent, classified in class 436, subclass 547.
 - IV. Claims 24-32, drawn to a method of detecting the presence of phosphotyrosine-containing proteins and the production of the immunoglobulin, classified in class 436, subclass 536.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions I and II are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions I (polypeptide) and II (polynucleotide) possess patentably distinct structural and biological function features.
3. Inventions I-II and III are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the feature of having a microporous polymeric substrate for the immunosorbent in invention III, is not required by the claims of other groups.

Art Unit: 1641

4. Inventions I-III and IV are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (MPEP § 806.05(h)). In the instant case, the product of invention I-III, can be practiced by a materially different method, such as isolation and separation of antigen/ligand.

5. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, the search required for one group is not required for the other, restriction for examination purposes as indicated is proper.

6. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

7. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
